One Health

by **dulan drift**, Wednesday, July 14, 2021, 14:42 - first published by formosa hut - thanks dan.
In essence, The Covid Atrocity was committed by individuals seeking to centralize power within their globalist Orgs. The scio-globo-Org at the heart of this is *One Health. This was Sir* Jeremy Farrar's power vehicle. We'll focus on him later - first let's examine the Org he rode into town on.

Yes, vanity, greed, power hungriness motivates our Celebrity Scientist actors - but in terms of understanding how they came to betray every principle of ethics in their profession, let's explore their ideological overlap with the CCP: they both love centralized, personalized bio-data. Free of any pesky oversight - *we are the oversight*.

We've seen the future (on our behalves) - *the night is dark & full of terrors* - only a global approach can *keep us safe, as a planet. We warned you* about Covid - then it happened, straight after, funnily enough, now we need to prepare for the *Next Disease X …*
(Or so the story goes. For the record: Ebright & Hobson, were *warning*, way before Daszak & Lipkin, that the Anthrax-funded GoF-craze was gonna lead to a pandemic.)
As Daszak, a leading One Health spokesperson says: *logic and reason* tells you this approach will: *save untold millions of lives*.

Which is precisely where empiricism, aka, ***The*** *Science,* becomes illogical. This is why:

1. Global amassment of personalized bio/health-data (including DNA), in conjunction with the CCP, opens the door to political abuse. That's humans & their Orgs for you. Like it or not, it's *part of the equation*, it *will* affect the outcome. If you ignore it, your answer will be wrong.

2. Information doesn't collect itself, ok, it kinda does, but who are the humanoids engineering this collecting of information? What vested interests do these collectors (& their Orgs) of empirical information have?

3. As self-appointed Globo-gate-keepers of bio-empricism, what empirical information is suppressed? (massive amounts if Covid is anything to go by)

4. *There's No evidence of that!* Common cry of our Celebrity Empiricists - but it doesn't mean something doesn't exist. Often it means points 1- 3. Additionally, it effectively bans *deductive thinking*, beyond the cut-off point of the empirical data. There are places in thinking that philosophy (logic, ethics, sociology) & art can go, but Empiricism can't..

Ironically, for empiricists, the first rule of The Covid Cover-up was: never discuss details

Meanwhile, the evidence is easy to find. Search the words genomic surveillance Uyghurs - see how you go … (or keep reading - we'll delve into that later…)

Yeah - but - we're taking the politics out!

Even if you were, which you're not, that's an admission you're ignoring an integral piece 1 of the puzzle.

Politics *is* involved in global biosurveillance. If you're weighing the long term effects & not taking this into account then: *stand-down*
You're proceeding from a *false premise* - thereby - making a terrible mistake - with catastrophic humanity-shaping consequences… (!)

The *One Health Initiative* is a good case-study of how The Science became corrupted.

One Health Initiative website: *In April 2006, Dr. Laura H. Kahn [MD, MPH, MPP] published the CDC article, 'Confronting Zoonoses, Linking Human and Veterinary Medicine' which* ***prompted Dr. Bruce Kaplan*** *[DVM] to contact her. Together they started the One Health Initiative, and Dr. Thomas P. Monath [MD] joined them in March of 2007 to establish the OHI triumvirate The One Health Initiative: Team Aims and Activities | Duke One Health.* (*Duke* - remember that name)

Princeton: (Laura Kahn) *published Who's in Charge? Leadership during epidemics, bioterror attacks, and other public health crises in 2009 with Praeger Security International* (terrorism security company). *Her main point is CDC should assume command in a bioterrorism event.*

GEDTdeFzq00Q2-9FXfGSk7iMsIK72gW8GvSJpu_6w6Ry0zpeC34Y8mLDcltxrnEIn8

So we've got a bioterrorism enthusiast & a *Zoonati* legend as founders of *One Health*.

One Health Initiative website: *The One Health Concept is .. a **worldwide strategy** for expanding interdisciplinary collaborations .. in health care for humans, animals and the environment. The **synergism** achieved will advance health care for the 21st century and beyond by **accelerating biomedical research** discoveries.. (and) **expeditiously expanding** the scientific knowledge base .. (which will) save **untold** millions of lives in our present and future generations.*

Great. Unless Covid was a lab-leak. In which case the *world-wide synergism of accelerated biomedical research collaborations and expeditious expanding* … **cost** … *untold millions of lives in our present and future generations.*

But let's not pre-judge. Let's take a closer look at a *One Health Initiative* scheme in action before we reach any conclusions.
