Cryptic Manner

Despite the exodus of sci-X-perts from the good-ship WIV, a few notables decided to hang tough with the CCP.

Double or nothing. To the bitter end.

This is not an exhaustive list - only from those Celebrity Scientists we've looked at:

Daszak (WIV/EcoHealth)

Holmes - Sydney Uni - Prox-O co-author

Andersen - Scripps - Prox-O lead-author

Linfa Wang*

Dwyer (WHO/Westmead)

Nature (Mega-science platform)

That makes you wonder, what does the CCP have on these dudes? It can't only be money. How do you get someone to say this:

Dwyer: *Now **of course** it doesn't mean that the outbreak actually started in Wuhan. .. It's an easy assumption just to say, 'It's all in Wuhan'.* (AKA Occam's Razor) *.. It could have been brought into Wuhan either from .. other parts of Asia, or indeed, other parts of the world. (2:45) ..(A) number of detailed studies need to be done to work out was the virus in Wuhan in an unknown manner or **cryptic manner** .. could it have been in other parts of the world?* (3:25)

Cryptic manner - that's a good one Dom. Strangely, i agree with you. GoF is a western technology imported into China. That's cryptic. Why on earth would we be teaching totalitarian regimes how to make bio-weapons?

In that sense, it's origin is *not* from China.

But was Covid physically made outside China then shipped/smuggled to Wuhan. Note: smuggling deadly viruses across borders, as crazy as it sounds, was common practice/knowledge amongst the international virology community:

Kristian Andersen: *In several cases,* ***international scientists*** *..* ***transported*** (ebola) **samples** ***back to their home countries for further research****, in many cases* ***without permission or knowledge*** *of the affected nations (Heymann et al., 2016).*

Aka: smuggling

The Bat Pack are *international scientists.* Could have come from US, Aus, Singapore network very easily. Let's not rule that out.

It would help explain the scale of deceit. The lengths Dominic/WHO have gone to.

China has called for an investigation of US bio-security practices in any further WHO Investigation - good idea.

US *is* the home of GoF. Logical place to search. Search Aus/CSIRO/Syd Uni, Singapore while you're at it - all those cohorts were cahooting on making bat viruses (a) transmissible to humans (b) more deadly

Wang Wenbin, Chinese Foreign Ministry Spokesperson: *I wonder when the United States plans to invite WHO experts to investigate the UNC bio-lab and USAMRIID? We suggest that the United States stop slinging mud at others and instead find out what happened in its own labs first.*

Hard to argue with that. Which explains the eerie silence from the US side.
