

Cryptic Manner

Despite the exodus of sci-X-perts from the good-ship WIV, a few notables decided to hang tough with the CCP.

Double or nothing. To the bitter end.

This is not an exhaustive list - only from those Celebrity Scientists we've looked at:

Daszak (WIV/EcoHealth)

Holmes - Sydney Uni - Prox-O co-author

Andersen - Scripps - Prox-O lead-author

Linfa Wang*

Dwyer (WHO/Westmead)

Nature (Mega-science platform)

That makes you wonder, what does the CCP have on these dudes? It can't only be money. How do you get someone to say this:

Dwyer: Now **of course** it doesn't mean that the outbreak actually started in Wuhan. .. It's an easy assumption just to say, 'It's all in Wuhan'. (AKA Occam's Razor) .. It could have been brought into Wuhan either from .. other parts of Asia, or indeed, other parts of the world. (2:45) ..(A) number of detailed studies need to be done to work out was the virus in Wuhan in an unknown manner or **cryptic manner** .. could it have been in other parts of the world? (3:25)

Cryptic manner - that's a good one Dom. Strangely, i agree with you. GoF is a western technology imported into China. That's cryptic. Why on earth would we be teaching totalitarian regimes how to make bio-weapons?

In that sense, it's origin is *not* from China.

But was Covid physically made outside China then shipped/smuggled to Wuhan. Note: smuggling deadly viruses across borders, as crazy as it sounds, was common practice/knowledge amongst the international virology community:

Kristian Andersen: *In several cases, **international scientists .. transported** (ebola) **samples back to their home countries for further research**, in many cases **without permission or knowledge** of the affected nations (Heymann et al., 2016).*

Aka: smuggling

The Bat Pack are *international scientists*. Could have come from US, Aus, Singapore network very easily. Let's not rule that out.

It would help explain the scale of deceit. The lengths Dominic/WHO have gone to.

China has called for an investigation of US bio-security practices in any further WHO Investigation - good idea.

US is the home of GoF. Logical place to search. Search Aus/CSIRO/Syd Uni, Singapore while you're at it - all those cohorts were cahooting on making bat viruses (a) transmissible to humans (b) more deadly

Wang Wenbin, Chinese Foreign Ministry Spokesperson: *I wonder when the United States plans to invite WHO experts to investigate the UNC bio-lab and USAMRIID? We suggest that the United States stop slinging mud at others and instead find out what happened in its own labs first.*

Hard to argue with that. Which explains the eerie silence from the US side.

Revision #2
