CCP Love-fest

As a WHO Expert Investigator, Peter Daszak would have us believe that tracing the origin of Covid is *complex...painstakingly difficult ... not exciting...pretty boring*. He emphasizes that anyone *not trained in how to decipher genetic codes* should stay out of it.

The CCP wrote the song-sheet that Daszak & co. are singing from. It was likely cooked up at a special WIV Retreat from Jan 11-14, 2020, that was chaired by *The Dark Knight* himself, Linfa Wang (that directly resulted in the Lancet Statement). WHO's ensemble (conducted by Tedros and Mike Ryan et al), then took on the role as lead vocalists. WHO's website tells us the origin is *a riddle that can take years to solve*.

Fellow WHO investigator, Dominic Dwyer from Australia, chimes in for the chorus:
*There is every chance **we won't ever find** patient zero or bat zero **-** but hopefully we can **learn better** how to react when **another pandemic comes along**.*

Oh, so the investigation's *not* about finding the origin - it's about a *better way to react* for the next one - which so happens to be the CCP's totalitarian system of people control.

*Tedros: As I have said repeatedly since my return from Beijing, the **Chinese government** is to be **congratulated** for the **extraordinary measures** it has taken ...**very impressive**, and beyond words. So is China's **commitment to transparency** and to supporting other countries. China is actually setting a **new standard** for outbreak response. It's not an exaggeration.*

W. Ian Lipkin (WHO rep, author of Prox-O, described by BBC as *the definitive paper ruling out the possibility of a lab leak*): *We should **take a page out of what China did**. .. I've met Xi Jinping **-** he's very impressive.*

Daszak: (China's response) *is unprecedented...incredibly efficient...and **open and transparent***.

Andrew Mesecar, head of biochemistry, **Purdue**(!) University US: *The United States cannot do something like this* (respond so quickly). *So **we are all going to learn from** how **China** is responding.*

So what's the big lesson in all this for the public to learn?

Daszak: *The **big lesson to learn** from this one is: we have to **spend the money** to properly prepare now. We estimate a **nine to one return on investment**, at least.*

The messaging from our publicly funded WHO operatives is:

1. Don’t expect answers to the origin question
2. Anyone who asks for a lab-origin to be investigated is a *conspiracy theorist*
3. China’s totalitarian system is the best model going forward
4. Get ready for the next one
5. Give me more money!
