Ch 6: Sir Jeremy Farrar

A deep-dive into the man who changed-the-world

- The ring-leader
- Inside the mind of Sir Jeremy Farar
- Farrar: politics - carpe diem
- Sep-Nov 2019: Lab-exit pre-awareness
- Malaria vaccines and true leadership
- Farrar - China - Pre-Covid

The ring-leader

by **dulan drift**, Monday, August 02, 2021, 11:07

This began as a look at the faces behind the One Health cartel - an attempt to put names to the *they* - who are shaping the future of humanity via genomics & AI - and their involvement in the Covid Atrocity. It was supposed to zero-in on Scripps & WuXi - huge players make no mistake - but *somehow* - all roads started leading to ...

Sir Jeremy

He was the man who stepped-up when the shit-was-flying - took control in those critical days - orchestrated the *united front* response from the world's leading experts/media platforms - *lock-step* **-** with the CCP's version of the origin of Covid.

Jeremy Farrar, Mar 2020: *The **power of 21st century science** to combat this pandemic is something that those going before us **could not have dreamt of**, and it is incumbent on us to do everything we can.*

There's a lot of *power dreaming* goes on in Jeremy's brain. Let's take a look-see inside it.

Sir Jeffrey is up there with the powerfulest, smartest, wokest people on the planet.

A BSc, *BMed Uni College, full-MD at Edinburgh, Phd in neurology, Oxford*

Sounds great. Must be intelligent to have studied at those joints. He is, but maybe not as smart as you would first think - we'll get back to that.

A recipient of the Ho Chi Minh City Medal for his work in Vietnam during SARS and H5N1 - Director of Welcome Trust - *One Health* globalist - genomics/AI enthusiast - key figure in orchestrating the world's Covid response.

Above all though - Farrar is a futurist.

Knows what's coming - has *a plan* to shape it.

Then along came Covid.

In the critical embryonic stages, Farrar swung into action. Used his immense power to:

- arrange/chair the legendary teleconference with Fauci, Fouchier, Dresden, Koopmans, Andersen, Holmes, Schreier, et al

- craft/promote (with Daszak) the Lancet Statement (which he signed)
- coordinate with Prox O authors (pangolin/wetmarket)
- co-ordinate blanket media support/censorship
- charge up the conspiracy theorist vilification to shut down origin questions
- praise CCP - shield totalitarianism from scrutiny

The above actions, master-minded by Sir Jeremy, were anti-science/political and/or silly.

Name calling is silly (though does reveal your insecurities - are you afraid of conspiracy theorists because there *was* a Covid Conspiracy?).

Shutting down questions about the origin is anti-science/silly/political. How we gonna stop *the Next Disease X* if we don't understand what caused this one?

Praising the CCP - a fascist totalitarian regime - as *open and transparent* (?!) - is also all three.

The consequences of these actions were catastrophic. Your actions, Sir Jeremy.

Meanwhile, alternative courses of *action*, such as that proposed by Taiwan, were known/available. Worked fine in Taiwan - right on the frontline - could have worked worldwide on the backline as well. (Too late now of course - but you knew that?)

You didn't listen to Taiwan's advice because:

Taiwan is a democratic/free country. Simple as that.

Therefore;

barred from your Global One Health Community.

To say there is any other reason is to perpetrate the lie at the heart of the One-Everything movement.

Taiwan's model was way cheaper - smarter - faster - better. No need for

all that death

or the warp speed torrent of vaccines - or their billionaire owners - or your One Health genomic surveillance systems - or the whole *new normal* where our freedoms have been evaporated …

… with you lot left in charge.

When Taiwan objected/reacted to the WHO ban, *Nature* labeled it as being *racist* - and colluding with *white-nationalists* (!)

Jeremy - the Oxford degrees - it's gonna be hard pleading stupidity. But that's not your plan is it ...

coming clean - being held to account

It's about the bigger picture

- *the vision* -

It's happening - one way or another - you *pulled that shit off* - now steamroll on. See what this *One Health* kingdom has got under the bonnet.

So it's interesting to examine your mindset when you assumed the mantle of *Captain Covid* in those crucial early days - that forever cast you as:

- *the-man-who-changed-the-world* -

just like you dreamed you would.

Inside the mind of Sir Jeremy Farar

by dulan drift, Wednesday, **August 11, 2021**, 08:49

June 19, 2019, **Francis Collins** introed his friend Jeremy Farrar, selected to deliver the *David E. Barmes Global Health Lecture* at NIH, titled:

Global Health in a Changing World

Francis Collins (TS4:00): *In 1996 he (Farrar) became the director of the Oxford University research centre in Vietnam in a very tumultuous time - (including) the outbreak of SARS .. (and) H5N1 - all of which he and his group were **in the middle of**.*

Seems like everyone involved in the Covid cover-up was *in the middle of* SARS - Lipkin, Daszak, Baric, Wang Linfa, Holmes, Farrar, Dwyer, Shi etc, etc (and/or Anthrax - Fauci).

Collins (TS4:20): *In 2013 he was appointed as the director of the Wellcome Trust - he was reappointed last year for a second five year term indicating the remarkable* (lack of democracy in the One Health world/) *success he has had in that role. And in that role he has been a wonderful contributor both in **the agenda** of that **institution** but also* for all of us who **care deeply** about **global health**.* (*technically agenda & caring about The Agenda is a tautology, but yeah, it's worth saying twice - Sir Jeremy is *Mr Agenda-setter* - who charismatically brings the powerful *The Science Community* into The Agenda.)

As for those of us who care deeply about the rise of totalitarianism ....

Collins (4:45): *He currently serves as the chairperson of an **informal group** called the Heads of International Research Organizations which has just been meeting here at NIH for the last two days involving **leaders of funding agencies from across the world**.*

And may I say, he's a very good chair - you don't walk into that meeting and not expect things to happen - I mean, because they have, and they will under his leadership.

So in all this fog of *One Health oneness* - Farrar is *the One*? The *leader of the leaders* of funding agencies.

Think about that - the attendees. Bill and Melinda, NIH, Wellcome, obviously - then, it's *across the world ...* did George Gao get a ticket…? For sure China is in there somewhere.

Love to see that guest list - couldn't find it. Couldn't find any ref on the internet whatsoever to a group *called The Heads of International Research Organizations.* As Francis says: *it's informal*...

The biggest feature of the *new normal* is we are constantly exhorted to *listen to the health experts*. It controls everything in our lives - suddenly - from restrictions on freedoms of speech, movement, assembly, to the explosion of personal surveillance, to vaccines.

Therefore; Farrar, the leader of that, is a humanity *disrupter*.

This is a role Farrar revels in. Was born ready to revel. First *the sense* of a *vision*, then the forming of it - the garnering of the energy/power to propel it …

things happen under his leadership

Now he's in the driver's seat. Hang onto your hats.

At first it was a surprise when i looked at Fauci's FOI emails how Farrar slotted into the ringmaster-role …

Makes sense now.

Farrar: politics - carpe diem

Farrar**, June 19, 2019:** (*P)eople .. are going to see* ***unbelievable changes in society in the next 20 to 30 years*** *in ways that .. will be very* ***disruptive****.*

Farrar the futurist. He knows what's coming:

- *disruption* -

It's Jeremy's job to shape it. For all of us.

Personally, i've had about enough of your D*isruption.* Right when *disruption* became a scientific buzz-word - we had the ultimate *Disruption*.

Farrar: 27:35: *At this moment, when the scientific advances are perhaps the most exciting in the last few decades, we are* ***facing*** *a society and a* ***political structure*** *which is* ***questioning*** *the very advances that are being made.*

The dreaded questioning. If you really want to infuriate a world-leading scientist, ask them a question…

(Francis, *King Arthur of Genomics*, was onto this since way back as well:

Technology: *(On Feb 14, 2001) Francis Collins, head of the Human Genome Project, made a* ***disturbing*** *claim about the future. "Major anti-technology movements will be active in the U.S. and elsewhere by 2030," he predicted.*)

Farrar: *As a scientific community, I think we have been complacent that people would accept scientific advances* (without question) *and they would* ***just thank us*** *for it.*

(A)s a community, we've got to engage much better than ***we*** *have done in the past in order to bring society with* ***us****. .. We have to see this as one of* ***our great challenges.***

The scientists being *us*. Us being society. This is a theme of Farrar's - repeated in other rousing speeches. He is always thinking *outside* the pure science. Thinks about the propaganda game - as Francis did - the *great challenges* of annoying democratic structures - societies - how to overcome them - bring *them* with *us*. *Us* being the *Deciders.* (you being a *Decidees)*.

Farrar: *That combination of science, innovation and society is the triangle that Wellcome seeks to put together.*

Farrar was keenly aware a GoF-exit would have been disastrous for all that. The cherished vision of *One Health* genomic surveillance *up in smoke*.

That's motivation for a cover-up right there.

Farrar: (7:13) *Our lawyer at Wellcome - promise I should never say anything about US politics so anything that may seem as if it may indicate any political view, please, it does not* (smirks) *- necessarily.* (audience laughter)

But as you go through your own political cycles (as opposed to *us,* who, like the CCP, just keep on ruling - Fauci's been director of NIAID since 1984!) *- and I can tell you we're going through an even worse one in the UK - I'll come back to that - just don't forget - the leadership role that you play. .. So thank you for your leadership and please: do* ***never never step down*** *from it.*

Ok, so much for *taking the politics out*. That's a straightforward call-to-political-arms from an unelected power cohorter. As co-author with Gao and Fauci on a powerful/political WHO/World Bank report, titled *The World at Risk*, you *urge political action.*

The message is: we have enormous power *- use it.*

Farrar: 8:50: *If not now then when? If not now - if we don't stand up for the values that we all hold dear* (One-Everything) *- at this time of real change politically around the world, then - and if not us - who* (WHO?) *will do it?*

Jeremy, it's not your job to *rule the world* - whatever you may have convinced yourself. You're not the messiah - *you're a very naughty boy*. No one voted for you for a start. If you want to play global politics, become a politician. But you won't do that will you? - coz you might have to face being questioned - getting cycled out. One-ism doesn't *do cycle-out*.

To finish the lecture Farrar quotes Shakespeare:

There is a tide in the affairs of men

which taken at the flood, leads on to fortune

Omitted, all the voyage of their life

is bound in shallows and in miseries

On such a full sea are we now afloat

And we must take the current when it serves

or lose our ventures

The signalling is loud and clear: As an empowered Science Community (thanks to Anthrax and SARS-1), we're on a full sea. Sail (for war) now. If not now, we'll *lose our global ventures*.

Interestingly Farrar omits the first line, which is:

We at the height are ready to decline

It's spoken by Brutus in Julius Caesar - which explores how warning signs can be mistaken for opportunity by ambitious *people at the height*.

To Jeremy's credit - he did note:

...it didn't end well for the speaker.

by **dulan drift**, Thursday, August 12, 2021, 10:49

Sep-Nov 2019: Lab-exit pre-awareness

Sep 2019: Farrar/Fauci/Gao et al (Global Preparedness Monitoring Board (sponsored by WHO & World Bank), ***A World at Risk*** p15): *The chances of a global pandemic are growing. While scientific and technological developments provide* ***new tools*** *that advance public health .. they also allow for disease-causing microorganisms to be* ***engineered or recreated in laboratories****.*

A ***deliberate release*** *would* ***complicate*** *outbreak response; .. s****ecurity measures*** *would come into play* ***limiting information-sharing*** *and fomenting social divisions.* (check)

Taken together, naturally occurring, ***accidental, or deliberate events*** *caused by high-impact respiratory pathogens pose* ***"global catastrophic biological risks."***

This demonstrates Farrar (Fauci/Gao) was warning of the danger of a lab accident and/or bioweapons scenario - *exactly* at the time Covid emerged.

Logic tells you Farrar/Fauci/Gao must have immediately thought it *was* a lab-escape when the news broke - as did Bat Lady - as did the Prox Origin authors Farrar was cohorting with.

Shortly thereafter, Farrar was tag-teaming Daszak and the Prox O authors in name-calling anyone who said the same thing as a *crack-pot conspiracy theorist.*

In the same report (p15) Farrar/Fauci/Gao note: ***Trust in institutions is eroding.*** *Governments, scientists, the media, public health, health systems and health workers in many countries are facing a breakdown in public trust. .. The situation is exacerbated by misinformation that can hinder disease control communicated quickly and widely via social media.*

Farrar sees this is an obstacle to his grand vision. No surprise that the Covid Conspiracy included social media giants, citing Farrar's Lancet Statement, instituted a sweeping ban on anyone suggesting Covid was a lab-leak.

Nov 6, 2019: Farrar/Koopmans/Nature: *(T)he fast-developing field of* ***genomic epidemiology*** *..and* ***artificial intelligence*** *will bring* ***more opportunities*** *to move towards 'precision public health'.*

Unfortunately, with social media highlighting t*he fast-developing field of scientists* (including Wellcome ones) holding hands with totalitarianism to create *more opportunities* to profile/control

Uyghurs, there has been a *breakdown in public trust*.

So how to fix that?

Farrar/Koopmans/Nature: *(I)t will be a challenge to **persuade countries** to invest in a **new surveillance system**, for example, before its **general effectiveness has been demonstrated at a country level**.*

At some stage in Jan 2020, Farrar went from:

assuming/knowing Covid was a lab-exit

to:

orchestrating a narrative with the CCP - his partner in genomic surveillance programs.

Did his futurist mind see Covid as an *opportunity in a crisis* to demonstrate the effectiveness of this new surveillance system vision? As well as save his grand plans from an inevitable crash-n-burn if the truth got out?

two birds with one stone

Covid *is* the Shakespearean *high tide* dream. Coincidentally, *high tide* can also means *orgasm* in Chinese.

Farrar/Koopmans/Nature: *Preparing for epidemics, therefore, requires global health, economic and political systems to be integrated. .. (T)he **WHO's** Pandemic Influenza Preparedness Framework brings together nation states, industry, other stakeholders **and the WHO** to implement a global approach to pandemic preparedness and response.*

(Check. All that came true. WHO/Tedros operating as the public face - Farrar calling the shots.)

Farrar/Koopmans/Nature: *Key governance components include drafting policies in advance and being willing to **implement those policies for data collection**.*

They were willing alright. Ready, willing and able - thanks to Jeremy's foresight.

Malaria vaccines and true leadership

Farrar: *The **truth** is, **global health** has been an absolutely phenomenal success story. Over the last few decades, the transformation in people's lives around the world has been nothing short of remarkable.*

Really?

Farrar: *Consider just one example: Between the turn of the century and 2012, 700 million people **did not contract** malaria, and **3.5 million lives were saved** from the disease because **biomedical research advances** were developed with and for the communities affected.*

On the other hand: *Consider just one* other *example* - Covid. *Between the turn of* 2020 and Oct 2021, 5 *million lives were* lost - potentially - ***because of*** *biomedical research advances.*

Let's put that aside, i'm still interested as to what biomedical research advances exactly proved to be *nothing short of remarkable* in the fight against malaria?

Farrar: *Science—**bed nets** and artemisinin combo therapy—were brought together with communication, with the embracement of society and with **true leadership**.*

True leadership - that being *you* of course.

Let's examine ***the truth*** of that statement from a *true leader*.

Firstly: *Bed nets* is not a breath-taking *biomedical research advance* - it's common sense. I went to Africa in the 80's - they had bednets - and Hydroxy - and insecticide. The *advance* was to soak the bednets in insect repellent.

But how about the other part of the *combo therapy*?

Artemisia: a traditional Chinese medicine for malaria (so not a modern *bio-research advance* either). Yes, it was synthesized into a drug - which seemed to ruin its centuries-old efficacy coz it worked for five minutes - then malaria developed resistance. As Harald Noedl, MedUni Vienna, noted: *We were way too optimistic.*

The truth is, the 3.5 million lives saved were from distributing more bednets soaked in insect repellent and increased spraying of insecticide in breeding places. Great. Not bio-medical

advances, though.

Unfortunately even these simple measures - they're important - but not solutions in themselves. Malaria shows resistance against insecticides - which are carcinogenic poisons basically, and bednets only protect you when you're in bed.

Like a lot of diseases, malaria is caused by:

corruption

Billions of dollars are spent each year on downstream technological-solutions to malaria but the upstream cause, man-made *corruption,* is left untreated.

Malaria is a terrible, but preventable disease. It flourishes where there's poor sanitation - which is caused by corrupt governments - in Africa - and four other continents - corruptly draining the resources of humanity's motherland - without giving back to its citizens. To the tune of $40 bil a year.

Aisha Dodwell: *This research shows that what African countries really need is for the rest of the world to stop systematically looting them.*

But we can't talk about that coz we're *taking the politics out* (along with the resources &/or organs).

NIH Record: *Citing several other conditions* (other than malaria), *he* (Farrar) *said the scientific community nevertheless cannot rest on its* (bednet) *laurels but must be* ***more vigilant*** *to see that* ***gains are not lost****.*

Farrar: *As these diseases are disappearing from many parts of the world through* ***vaccination*** (bednets/artemisia are not vaccines, Jeremy) *and as people lose that personal experience or connection to these diseases, things like* ***the anti-vaccine*** *movement become* ***more powerful****.*

Hang on, one minute we're talking about the great bio-medical advance of bednets - the next you're railing against your favourite *hobby-horse* - the ***vaccine-hesitant*** *movement*.

Which you're afraid will become even *more powerful?*

Last time i checked, vaccine-hesitant people were being tear-gassed/bashed/maced/fined/jailed/ banned from earning a living/travelling/shopping - all based on:

the advice from the health experts.

But even with all that power to crush, you're still afraid? That's telling.

Judging by the growing protests around the world, i can see why you would be, though. People are told they need to take multiple doses of experimental vaccines (or face ex-communication from society) - due to Covid. But you won't tell us what Covid was due to.

You know but you won't say.

If you want to restore the public's faith in Science, it's quite easy - simply #dacktheredactions from your Science discussions around the Feb 1 teleconference - show the public that we can trust the experts who dictated the western world's response to Covid. Why not?

Farrar - China - Pre-Covid

Dec 11, 2019: Farrar/Nature: *I know China's CDC very well, and I was involved in China's CDC through SARS .. in 2003–2004–2005. ..China CDC at that point was underfunded and struggled for influence ..(but) what China's done in the last fifteen years .. they've learned lessons from the U.S. CDC* (which milked the Anthrax scam for billions and became super-powerful) *and now there is an incredibly strong central CDC in China.*

So a few days before Covid became public knowledge, Farrar goes onto the *Nature* platform to give a rousing endorsement of the CCP's CDC. Then aggressively doubled-down on that endorsement with the Lancet Statement once Covid broke.

I wonder if it's because of this:

Intellasia: *A further three of the signatories were from Britain's* ***Wellcome Trust****, which has* ***funded work at the Wuhan Institute of Virology*** *in the past. ..When approached, the Lancet and Wellcome Trust refused to comment further on the letter.*

It's also interesting to note that:

Dec 2014: Market Business News: *The Wellcome Trust, made £2.5 billion on its investment portfolio valued at £16.4 billion. It recorded a return of 15.4% for the year ending on September 30th, 2014. The Trust's high investment return increased partly because of its shareholdings in retail giants Alibaba and JD.com.* (both Chinese companies)

Through to **Dec 2020**, investments in Chinese companies under Farrar's direction have been flagged *BUY*. Japan: SELL.

Financial Times: *Heeding the calls of Jeremy Farrar .. (Wellcome) had already put in place hedges across its portfolio that allowed it to book profits of £248m in its financial year to the end of September. This foresight ensured Wellcome's investments grew by 12.3 per cent to £29bn. This was the highest return since 2016, and the first time the fund had invested more in Asian equities than in Europe, including the UK.*

Wellcome Trustees Report: *We added to Chinese equities in the market weakness in Q4 2018, which was partially offset by* ***sales of assets in Japan****.*

The Farrar *pivot* - from Japan to China.

This investment, however was threatened by the Trade War of 2019 - and *rising tide* of cultural retreat from globalization:

Wellcome Trustees Report: *After a long period when owners of capital, **like Wellcome**, have been the beneficiaries of globalisation, of technological **disruption** and of **ultra-accommodative** monetary policy, **societal attitudes** are **shifting**.*

Luckily, Covid saved the day by re-energizing globalization to the point where:

Financial Times: *Sir Jeremy said 2020 had been a **spectacular year** for science, pointing to global co-operation.*

Farrar: *Science has delivered in 2020. Advances in science **often** come out of crises.*

Cometh the Crisis cometh the man…

Apart from the above investments, Wellcome, as we covered previously, also cooperates with the CCP on genomic surveillance experiments.

So whaddya gonna do? From a Farrar/Wellcome perspective, *don't rock the China boat*.

Didn't find anything on Farrar's personal financial links with China, nothing obvious. My feeling is, unlike many of his colleagues, he's not motivated by greed or even vanity - like your Lipkins and your Daszaks. The money generated by these China investments *is* important, coz it funds the manifestation of Farrar's globalist *vision*.

But Power is Jeremy's thing - not money. He's an idealist with an inflated ego. He *envisions* a centralized world - where he's pulling the strings.

This Oneness overlaps with the idealism of totalitarian regimes - say the CCP for example - who are *all for* Oneness too!

Farrar, June, 2014: *Ten years ago* (SARS)*, China blocked access. But now China is **transparent and superb** at disease monitoring.* (my brackets)

Like everyone, Farrar thinks he's doing this for:

the common-good ...

Especially *the poor people in developing countries*. It's how he justifies it. It's why he identifies with the broad strokes of Communism (honed over 15 years in Vietnam?) It's why he finds common ground with the CCP's *system of government*. It's a constant.

If you wanna see this genomics/AI revolution happen in your lifetime - be the one who has a say over what DNA is selected for - or against - take your rightful place in history - *science tells you*, totalitarianism is the best way to *get things done.*
