Inside the Feb 1 Teleconference

by **dulan drift**, Tuesday, August 17, 2021, 07:45

Inside the infamous Feb 1 teleconference - some colorful characters were *online*.

You think Fauci is bad - there was also *Fouchier*, the controversial GoF evangelist who *souped-up* bird flu. Reminds you -Genomics & GoF - go hand-in-hand. Eddie Everywhere was there of course, Andersen, Dresden, Koopmans.

One day i want to recreate the dialogue from that meeting, but more than that, i want to get this thread finished - out of my head. Here's the thrust coming from Farrar who chaired:

Whatever we say here is classified. We need to speak openly to make the right decisions. To speak openly, we need to know that this discussion will remain strictly confidential. If you're uncomfortable with that then you should leave this call. (nobody leaves)

Good. So yes, it looks like it was engineered - in WIV - probably. I just can't figure out how this gets accomplished in nature. Sorry to say.

Then it gets worse. NIH funded EcoHealth GoF at WIV.

Given the climate of anti-science/globalism that already exists, that I've been warning about, that spells ***death*** *to all our One Health genomic GoF visions/funding - everything we've all worked so hard for...*

The End.

Or...

We pivot

- *We come out fighting. Turn this negative into a positive.*
- *Present a plausible alternative - as Kristian will outline - pangolin/wetmarket - say it could take years - we may never know etc - same as Anthrax, same as SARS, Ebola, MERS. But don't say Anthrax, obviously, haha. Maybe not Ebola either. The point is: it worked then,*

it will work now. This is not our first rodeo - but it's our biggest one.

- *Play the long game. See the future before it happens. Make it happen. In ten years time ... no-one will know or care who-or-what-the-fuck caused it.*
- *If it hadn't happened with a Gof experiment in Wuhan, we all know it may have happened, eventually, by - (cough, touch ear) - natural means ... Or terrorists might have done it! It was a race against time - we did our best to stop it. We can still feel proud of what we have achieved - going forward.*

Positives: *If you forget about the real origin for a minute, this virus is exactly what we have been predicting, preparing for. It is still the perfect plat-storm to demonstrate/execute our One Health dream. We can make this disruption work for us. One non-Truth. One Health. One Planet. We still sail the rising tide - turn it to advantage - for the common-good. But it's now or never...*

As scientists, leaders, we accept the heavy burden of responsibility. It is our job to see the big-picture. To weigh the inputs - then make the tough decision that will affect not only the future of science, but the path of humanity.

All in favour say 'Aye'. (Unanimous 'Aye')

FAQ: But what if we get caught?

Ans: (powered by FatCheck.global.con): By whom? haha We have *Big-Everything* on our side - worked fine all the other times.
